kyle.delfin.dev@gmail.com | 09476384433 | Aklan, Philippines | linkedin.com/in/aldrin-kyle-delfin/ | github.com/kyledelfin2006

TECHNICAL SKILLS

Languages: Java, Python, SQL, Bash

Backend: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, REST APIs, Hibernate

Databases: PostgreSQL, MySQL, DynamoDB

Cloud & DevOps: AWS EC2, S3, RDS, IAM, Cognito, Docker, GitHub Actions, CI/CD

Testing: JUnit, Mockito, Testcontainers, JaCoCo

Tools: Git, Maven, Flyway, Swagger/OpenAPI, Postman, Linux, IntelliJ IDEA

EXPERIENCE

Backend Engineering Intern

July 2026 – Present

Flyrank AI

- Developed a containerized Library REST API with 15+ endpoints for search, pagination, and data aggregation using Java 25, Spring Boot 4.1, and PostgreSQL.
- Automated database schema migrations with Flyway and standardized API error handling through a centralized global exception handler, improving deployment consistency and preventing unhandled application errors across all REST endpoints.

Co-Founder | Lead Systems Engineer

Aug 2026 – Present

DevGuild

- Spearheaded a 25+ student-led developer organization, leading cross-functional teams to build and deliver production-grade software for external clients, generating **₱5,000-₱10,000** in net revenue per project.
- Designed and managed Docker-based containerization workflows for **3 internal development groups**, reducing deployment and QA turnaround from **7 days to 2-3 days**, through standardized Dockerfiles, image registry usage, and Docker Compose setups.

PROJECTS

Tabang: Flood Reporting & Response System | [JavaScript, Node.js, React, Cloudinary, Firebase, SDLC]

- Built and deployed a flood reporting and emergency response platform for Aklan, enabling residents to submit incidents and request assistance while allowing responders to claim, track, and resolve cases.
- Implemented role-based workflows for **4 user roles**—Residents, Responders, Reviewers, and Admins—with protected access to incident management, responder approvals, hotline administration, and role assignments.
- Engineered privacy-focused data protection using Firestore security rules, restricting sensitive coordinates, contact details, report descriptions, identity documents, and image metadata to authorized users.
- Delivered Tabang as the **7th-place finalist among 25+ teams** at UPV KomsaiHack 2026 and migrated the original multi-page prototype into a maintainable React application with automated testing and deployment workflows.

Libro: Library Management System | [Spring Boot, Spring Data JPA, Spring Security, Docker, CI/CD, Flyway, OCI]

- Validated application behavior through **56+ unit and integration tests**, including Testcontainers-backed PostgreSQL testing, while automating **100% of schema changes through Flyway migrations** across development, CI, and deployment environments.
- Standardized local environments with **Docker Compose**, containerizing the API and PostgreSQL database with persistent storage and environment-based configuration for reproducible development and testing.
- Streamlined the build and deployment workflow with **CI/CD** pipeline via **GitHub Actions**, reducing manual release effort by automating tests, JaCoCo reports, Flyway migration validation, frontend/backend Docker image builds, and deployment to **Oracle Cloud Infrastructure (OCI)**.

EDUCATION

Bachelor of Science in Information Technology Major In Software Engineering | Aklan State University | Aug 2025 – Present

CERTIFICATIONS

AI For Automation NC III – , August 2026
